GEOGRAPHY AND ENVIRONMENTAL HISTORY
GEOG 4997

Fall 2014, Monday and Wednesday 2:30-4:00 pm

Dr. Giacomo Parrinello (gparrinello@lsu.edu)

Studying human interaction with the natural world in different times and places is key to understand the roots of present day environmental problems and face the challenges of the future. Combining the insights of geography and environmental history, this course will examine some of the major issues of that interaction in various epochs and regions:

- resource use and misuse,
- biological exchanges,
- hazards and climate,
- urban environments,
- and the new age called Anthropocene...
